

**GEODE RELIC .5 MILLION YEARS
BOOT PRINT 500 MILLION YEARS**

Something apparently wearing a shoe left this footprint in what is now Cambrian limestone, found at Antelope Springs, Utah. According to accepted geologic time scales, the crushed trilobite under the heel means this print is 500 million years old! (DESERET NEWS photo; appeared in the Creation Research Society Quarterly, 5(3), December, 1968.)

X rays of the left half of the concretion (left, side view; right, top view) reveal an obviously artificial device sealed within. . . .
